

Noninvasive Masks

F&P FREEMOTION™ NONINVASIVE MASKS

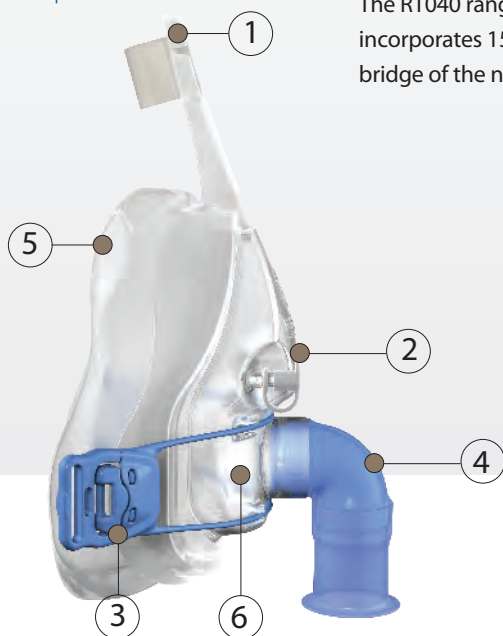

Fisher & Paykel Healthcare produces a range of masks to supply humidified gas during noninvasive therapies.

The complete range is compatible with all humidifiers produced by Fisher & Paykel Healthcare.

The masks are designed with patient comfort in mind, while ensuring delivery of the desired gas flow and pressure levels determined by the therapy.

Designed for noninvasive ventilation, the FreeMotion™ mask range includes both vented and nonvented full face masks, as well as a vented nasal mask. All three masks are designed to maximize patient tolerance to treatment through superior comfort and performance.

Under-Chin Seal

The FreeMotion full face masks incorporate a seal that fits under the chin, accommodating a far greater range of face shapes and sizes compared with the traditional under lip seals. The under-chin design maintains the integrity of the seal at all times.

Exhalation Vents: RT040 S/M/L

The RT040 range of vented full face masks incorporates 15 small vent holes at the bridge of the nose. These vents provide

superior elimination of CO₂ from the mask, while being significantly quieter than a single-port vent.

Range of sizes

The FreeMotion full face masks are currently available in three sizes. While the medium size encapsulates the majority of the adult population, small and large sizes are available to match the patient range. The FreeMotion nasal mask is currently available in two sizes, standard and large.

	1. Unique Headgear System <ul style="list-style-type: none"> Flexible, easy to secure Cushioned forehead rest
	2. Built-In Ports <ul style="list-style-type: none"> Pressure monitoring Supplemental oxygen Flexibility of therapy and flow source
	3. FreeMotion Glider™ <ul style="list-style-type: none"> Quick release clip for easy fit and refit Single motion refit Provides freedom of movement
	4. Dual-Swivel Elbow <ul style="list-style-type: none"> Aids patient movement Allows flexibility of positioning
	5. FlexiFit™ Seal <ul style="list-style-type: none"> Reduces pressure at nasal bridge Comfortable Soft and flexible Maintains seal integrity
	6. Dead Space <ul style="list-style-type: none"> Low dead space design Improved washout reduces CO₂ rebreathing
